

## Environmental modifiers in Hereditary Spastic Paraplegia

Pauline Lallemant-Dudek  
Dr Sophie Tezenas du Montcel, Pr Alexandra Durr

Paris Brain Institute (ICM)  
Hôpital Armand Trousseau, Paris (APHP)

ERN - 9th July 2020

## Question to the audience

### Question 1 :

What is your professional background ?

- ▶ neurologist,
- ▶ neuropsychiatrist,
- ▶ physiatrist,
- ▶ researcher,
- ▶ resident,
- ▶ patient or patient representative,
- ▶ nurse,
- ▶ physiotherapist,
- ▶ occupational therapist,
- ▶ speech / language therapist,
- ▶ geneticist,
- ▶ psychologist,
- ▶ other.

### Question 2 :

Have you ever seen patient with hereditary spastic paraplegia ?

- ▶ Yes, very often,
- ▶ Yes sometimes,
- ▶ Just a few,
- ▶ No, never

Group of rare, inherited, neurological diseases :

- ▶ prevalence about : 2.2 to 4.1/100,000
- ▶ broad genetic heterogeneity : more than 79 *SPG* genes,
- ▶ broad clinical heterogeneity : age-at-onset and symptoms severity.

Ruano, L., Melo, C., Silva, M. C. Coutinho, P. The global epidemiology of hereditary ataxia and spastic paraplegia : a systematic review of prevalence studies. *Neuroepidemiology* 42, 174 ?183 (2014).

# Variability in SPG4

## Age of onset determined by the genetic mutation

- Variation de l'âge de début de la pathologie en fonction de la mutation :

**Figure 4** Age at onset distribution and genotype correlations. **(A and B)** Boxplots representing the age at examination /at onset for patients carrying missense or truncating mutations (Mann-Whitney test, \*\*\*\* $P < 0.0001$ ). **(C)** Distribution of the age at onset of missense- and truncating-mutation carriers. The lower age at onset linked to missense mutations is evident, shown by the density curve (red), characterized by a first peak between birth and the first decade of life and a second smaller peak between the third and fifth decades. Truncating-mutation carriers (blue curve) are characterized by a later age at onset, with a small peak between birth and the first decade of life and a major peak between the second and fifth decades.

Parodi, L. et al, (2018). Spastic paraplegia due to SPAST mutations is modified by the underlying mutation and sex. Brain.

## Treatments

1. To look for environmental modifiers :
  - ▶ which could be added to genetic modifiers,
2. To take an overview of the population affected by SPG :
  - ▶ disease evolution,
  - ▶ management and treatments.

## Limits

### Rare diseases :

- ▶ the number of patients is reduced,
- ▶ the genetic heterogeneity is great.

# Data collection

Introduction

Aims of the study

Méthod

Results

Flow-chart

General information

Professional activities

Patients beliefs

Treatments

Data collection is carried out by means of a self-administered questionnaire.

This questionnaire is completed by patients with spastic paraparesis and is proposed :

- ▶ during medical consultations,
- ▶ thanks to patients' organisations (APL, APSHE).

## Data collected

Among the data collected, there are :

- ▶ Anthropometric data :
  - ▶ sex,
  - ▶ age,
  - ▶ BMI,
- ▶ Medical information :
  - ▶ early post-natal history,
  - ▶ other history (cancer, cardiovascular disease, diabetes),
  - ▶ age-at-onset,
  - ▶ symptomatic treatments and their effectiveness,
  - ▶ factors that influence spasticity,
- ▶ Life habits, social habits... :
  - ▶ toxic consumption,
  - ▶ environment (place, work, food).

## QUESTIONNAIRE

Dans le cadre d'une enquête menée par le Dr Alexandra Durr et le Dr Christel Deplenne (Institut du Cerveau et de la Moelle épinière) portant sur l'étude des liens éventuels entre les paraparésies spastiques héréditaires (PSH) et les facteurs environnementaux, nous souhaiterions recueillir des renseignements complémentaires vous concernant. Ces informations, qui resteront anonymes, pourraient nous permettre d'avancer dans la compréhension de la maladie.

<b>Infection: n (%)</b>	<b>5 (2.96%)</b>	<b>1 (1.06%)</b>	<b>p=0.3240</b>

# Factors affecting spasticity

## Conclusion :

To improve spasticity, advice that may be given :

- ▶ to avoid stress and cold,
- ▶ to privilege warm environments,

To improve spasticity, medical team should :

- ▶ help to manage fatigue,
- ▶ prescribe physiotherapy,
- ▶ insist on and facilitate adapted physical activities.
